

Milestone 3: Workforce Portal, Recruiter Management & Admin Panels

1. Relational Database Mappings for Workforce Operations

- **Job Opportunity Mappings:** Created JobOpportunity.java mapping to job_opportunities table. Columns track recruiterId, title, companyName, requiredSkills, and compensation.
- **Job Application Mapping:** Programmed JobApplication.java mapping to job_applications table. Creates relational links between student profiles and posted job opportunities.
- **Entity Association Handling:** Implemented FetchType.LAZY on collection mappings to optimize database performance during large applicant queries.

2. Implemented Features: Workforce & Recruiter Portal Dashboards

- **Workforce Dashboard:** Designed visual summaries showing pipeline indicators, total job post statuses, application volumes, and recruiter ratings.
- **Recruiter Portal & Job Posting:** Programmed form interfaces allowing recruiters to post jobs, edit job details, specify required skills, and toggle posting statuses.
- **Candidate Management:** Developed application viewer cards exposing candidate summaries, uploaded resume locations, and skill analytics scores.

3. Implemented Features: Applicant Pipeline & Hiring Workflows

- **Staging Workflow State Machine:** Implemented JobApplicationStatus.java enum supporting transition states: APPLIED, SCREENING, INTERVIEWING, OFFERED, REJECTED.
- **Pipeline Transition Controller:** Exposed endpoints updating candidate statuses, verifying security roles, and generating audit logs of status modifications.
- **Recruitment Analytics:** Created aggregate queries counting candidate conversion funnels, pipeline stages, and average time-to-hire metrics.

4. Implemented Features: Global Admin Panel Operations

- **Admin Dashboard UI:** Deployed central diagnostic panels tracing system load, user volumes, database connections, and application errors.
- **User Management Console:** Created interfaces listing platform accounts, enabling admins to modify profiles, ban users, and upgrade role permissions.
- **Course Management Admin:** Developed tools for admins to add new courses, modify syllabi, upload course contents, and monitor enrollment metrics.

- **Complaint Tracking:** Set up ticketing systems routing bug reports, user feedback, and complaints to admin workflows.
- **Certification Management Admin:** Created interfaces validating academic licenses, updating certificates, and issuing credentials.
- **Diagnostics & Monitoring:** Configured diagnostics capturing network latency, CPU usage, and database query executions.
- **Reports and Insights:** Deployed exporting interfaces generating CSV/PDF reports summarizing system revenue and user engagement statistics.

5. Deliverables & Technical Verification

- **[X]** Recruiter workspace dashboard views displaying applicant counts.
- **[X]** Dynamic job creation wizard and validation controller services.
- **[X]** Admin console layouts monitoring user accounts and database sessions.
- **[X]** Analytical metrics queries returning recruitment funnels data.
